

Title	Problem	Solution	Audience & Impact	Inspiration & Research
Lego for Music Artists	Music production is locked behind expensive hardware and complicated software with a steep learning curve. This limits creativity and accessibility for beginners or low income groups wanting to learn	Modular, lego-like system that lets artists physically build and create music by snapping together interchangeable blocks for instruments, effects, tempo, mixing and more	Music Artists on the go Children Beginners	Link
AI Sticker Digi Camera/Multi Camera 3D Photos	Digital photography can feel too polished or impersonal, while alternatives like polaroids and photobooths aren't always accessible or convenient	A portable digital camera that uses AI to turn photos into personalized stickers with in-built filters and drawings AND/OR Multi camera point and shoot that click a photo at the same time - result is a photo/gif that feels like a 3D live experience	Everyone	Link #1 Link #2 Link #3

Other brainstorming for ideas:

Diffusion model that can recreate looks based on stuff you found on instagram and the mode selector can recreate that look for yourself

Two Parts: Hardware & Software

Hardware:

- Raspberry Pi Camera Module 3, High Quality Camera, wide-angle and autofocus camera modules
- Thermal Printer/Polaroid Printer
- Arduino Uno
- Rechargeable Battery

Electronics Diagram

Software

- World Brush: Eyedropper that captures real world textures/imagery
- Instagram Integration
- Landing Page

Video

Powerpoint Slides

Script

How Does it Work

- Turn Camera On
- Select Mode: World Brush OR Filters
- World Brush - Point at a texture and hold down a button for 3 seconds to lock it in
 - Then Take Picture
 - Then use brush to draw on picture
- Filter - Select Filter
 - Then Take Picture
 - Image Processing
- Press Confirm
 - Prints Picture Physical Format
 - Auto Uploads to Instagram Story/Feed
- Camera Off
